SKILLS

Programming Languages: Python, Java, C++, C, Swift, JavaScript, HTML5, CSS3

Frameworks & Libraries: Django, Flask, FastAPI, Flask-SQLAlchemy, Flask-WTF, WTForms, TensorFlow, Keras, Scikit-learn, Streamlit, Node.js (Hono)

iOS Development: UIKit, SwiftUI, SwiftData, CoreML, Vision, AVFoundation, MVVM Architecture

Machine Learning & Data Science: CNNs, RNNs, SVMs, Image Processing, Feature Extraction, Data Preprocessing

Data Visualization & Analysis: Pandas, NumPy, Matplotlib, Seaborn

Database Technologies: MySQL, PostgreSQL, SQLite, Firebase (Firestore, Authentication), Prisma ORM

APIs & Integrations: REST APIs, Twilio API, Pusher

Frontend Technologies: Tailwind CSS

Tools & Platforms: Linux, Git, Jupyter Notebook, Google Colab, Xcode, JIRA

EDUCATION

MIT World Peace University

2023 – Present | Pune, India

Bachelor of Technology in Computer Science

CGPA: 9.1 / 10

PROFESSIONAL EXPERIENCE

Infosys

04/2026 – 05/2026 | Mysuru

iOS Intern

- Engineered a high-performance iOS frontend using SwiftUI, implementing a modern design system with glassmorphism, dynamic animations, and MVVM architecture for scalable state management.
- Architected and deployed a real-time communication system using Pusher, Hono (Node.js), and Prisma, enabling seamless messaging across multiple user roles.
- Designed and implemented role-based access control (RBAC) and session management for Managers, Drivers, and Maintenance staff, ensuring secure and segmented workflows.

Infosys Springboard

11/2025 – 02/2026 | Pune, India

Artificial Intelligence Intern

- Developed an end-to-end machine learning system to identify scanner brands from scanned document images.
- Built a custom dataset of high-resolution TIFF images and designed a preprocessing pipeline, improving data consistency by ~30%.
- Implemented a Support Vector Machine (SVM) baseline using texture-based features, achieving ~85% classification accuracy.
- Designed and trained a Convolutional Neural Network (CNN) to learn device-specific artifacts such as noise patterns and texture inconsistencies, achieving ~93–96% accuracy.
- Optimized model storage and deployed the final CNN via a Streamlit-based interface.

Full Stack Trainee

- Contributed to a production-grade School Management System built on the Python–Flask framework, supporting institutional operations.
- Developed staff profile management modules capturing qualifications, experience, and contact information.
- Implemented attendance tracking, teacher scheduling, and class assignment systems with role-based access and validation.
- Built financial analytics dashboards providing real-time insights into revenue, outstanding fees, and collection efficiency.
- Engineered attendance and grade management workflows with dynamic report card generation using server-rendered templates.

PROJECTS

Samwāad

08/2025 – Present

Real-Time Speech Diarization & Accessibility Platform

- Designed an iOS-based accessibility system enabling real-time multi-speaker captioning for users with auditory impairments.
- Engineered a low-latency audio processing pipeline for speaker diarization, sentence segmentation, and live transcription refinement.
- Implemented scalable, offline-first data architecture for secure synchronization of conversations and user-specific voice profiles.
- Developed AI-assisted post-conversation summarization for improved accessibility and usability in group interactions.

Sub-Atomica

02/2026 – Present

AR-Based Quantum Mechanics Visualiser

- Built an augmented reality application to simulate core quantum mechanics concepts, including superposition, tunneling, and wave-particle duality.
- Implemented real-time 3D simulations using ARKit and RealityKit with gesture-driven interaction and spatial mapping.
- Designed an interactive “Lab Notebook” system for capturing and analyzing AR-based experiments.
- Integrated on-device computation and custom UI/UX to translate abstract physics concepts into intuitive visual experiences.

AI Travels

04/2026 – 04/2026

AI-Powered Travel Itinerary Assistant

- Architected an AI-driven travel assistant that converts natural language WhatsApp conversations into structured travel leads and personalized itineraries.
- Built a resilient LLM pipeline using Google Gemini (Flash/Pro) with automated model fallback to ensure high availability.
- Implemented asynchronous itinerary generation using FastAPI background tasks to handle long-running LLM workflows.
- Integrated Twilio WhatsApp API for real-time conversational interaction with users.
- Developed a dashboard for agencies to monitor leads, budgets, and chat history.
- Optimized response delivery by segmenting long outputs to comply with WhatsApp message constraints.
